Gigacenter - Getting Started Guide

1 Locate your Gigacenter

Default Settings
SSID: CXNK0028059F
ONU MAC: EC4F82296875
Security Type: WPA2.AES
WPA Key: 57938a3a291888c6
IP Address: 192.168.1.1
User/Password: admin/bbb31744
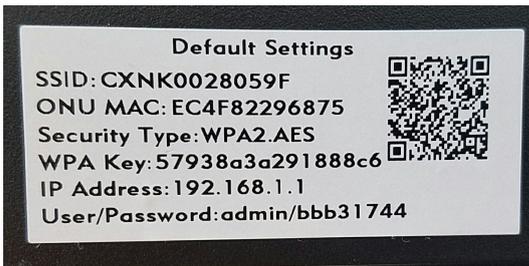

- Locate the Default Settings sticker located on the front of your Gigacenter

- This will provide you with the default configuration that's been applied to your Gigacenter.

  Note - the default IP Address is 192.168.222.1 instead of 192.168.1.1 displayed on sticker

2 Connect a WiFi device

- From your WiFi device, open the WiFi settings

- Select the SSID from the Default Settings sticker in Step 1

- When prompted for the WiFi security key, enter that from the Default Settings sticker in Step 1

3 Connect a wired device

- Your Gigacenter has 4 Gigabit Ethernet LAN ports for all your wired devices. These are the ports in Yellow on the side of the Gigacenter

- If your device is setup for DHCP, plug it in and you're ready to get connected to the Internet!

4 Custom configuration

- If you need to apply some custom settings, such as renaming the Wifi SSIDs, adding a guest Wifi, or changing the LAN settings you can do that and more through the Web interface.

- From a device connected to the gigacenter (wifi or Ethernet) browse to https://192.168.222.1

  https://192.168.222.1
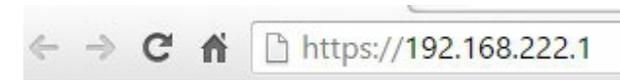

- Enter the User/Password from the Default Settings sticker in Step 1

- Make the changes by selecting the appropriate settings from the intuitive user interface (UI).

- Please see our comprehensive user guide for detailed instructions on the Gigacenter settings by visiting https://support.secom.net and search Gigacenter

5 Still need help?

- Did the above information not answer your question? No problem, feel free to contact our support by emailing support@secom.net or calling 1-800-657-7149
